

DBMS Demo Notes

Database Management System (DBMS) is software used to store, organize and manage data efficiently. These notes are generated for demo and testing purposes in the EduShare project.

Topic	Explanation
DBMS	Manages and stores data in databases.
RDBMS	Relational Database Management System.
Primary Key	Uniquely identifies records.
Foreign Key	Creates relationship between tables.
Normalization	Reduces data redundancy.

Basic SQL Commands

```
CREATE DATABASE college;  
CREATE TABLE students(id INT, name VARCHAR(50));  
INSERT INTO students VALUES(1, 'Ayush');  
SELECT * FROM students;
```
